

LOGGING FUNCTIONS

USDA Log

All temperatures, in accordance with USDA requirements, can be printed out automatically, at selected time intervals.

The USDA log is controlled direct by the CPU and will be printed out on a special USDA printer. The USDA log can also be printed out on demand at any requested time. In this case the USDA log will be printed out on the alarm printer.

The USDA log provides a print-out of:

- ship name
- voyage no.
- departure and destination
- date and time
- USDA selected temperature data

Alarm temperatures will be marked with an asterisk.
